

Sectigo Certificate Integration for Google Load Balancers

Google load balancers are broadly deployed as part of many enterprises' web-based services providing tremendous scalability and flexibility. Load balancers require digital identities in the form of SSL/TLS certificates which ensure their validity and confirm their ownership.

Sectigo Certificate Manager provides an integration (or connector) which enables the automated issuance and import of certificates to Google Cloud Platform (GCP) where they can be accessed via the 'Load balancing components' configuration menu. Orchestration tools such Terraform and Ansible can be used to automate deployment of those certificates into the load balancer instances. Sectigo Certificate Manager integrates with GCP to consolidate the lifecycle management of all certificates in the business under a single platform.

By including Sectigo Connector for Google Load Balancer in the cloud environment, enterprises gain increased management and control of certificates. This enables an enterprise to use Sectigo certificates in the Google Cloud environment.

With Sectigo Certificate Integration for Google enterprises will be able to

- Unify certificate policy and lifecycle management in one system.
- Provide certificate issuance from SCM into the Google Cloud Platform, enabling oversight and control of Sectigo certificates used for Google Load Balancers.
- Provide visibility of all Sectigo certificates across the enterprise from a single dashboard in SCM.
- Integrate with orchestration solutions such as Terraform and Ansible to automate and streamline cloud-based application deployments.
- Reduce complexity of deploying certificate management across multiple regions and cloud platforms.
- Provide capabilities to replace revoked certificates and to renew certificates instantly, allowing rapid response to threats.
- Automate certificate issuance and renewal process reducing costs, risks and human error.

For more information on Sectigo's Google Load Balancer Connector, SSL/TLS certificates or certificate management in general please contact Sectigo Sales (sales@sectigo.com).

About Sectigo

Sectigo is a leading provider of digital certificates and automated certificate lifecycle management solutions to leading brands globally. As one of the longest-standing and largest Certificate Authorities (CA), Sectigo has over 20 years of experience delivering innovative security solutions to over 700,000 businesses worldwide. Sectigo is the leading certificate lifecycle management provider supporting multiple CA vendors and integrating with the largest software ecosystems in the world.
